|-----------------------------------------------------|-----------------------------------------------|
| <b>WELL NAME</b> : Awuna Test Well No. 1            | <b>REPORT DATE</b> : 1980-08-14               |
| <b>API NUMBER</b> : 50-089-20005                    | <b>ELEVATION</b> : 780.0 FT KB                |
| <b>OPERATOR</b> : Husky Oil / USGS                  | <b>TOTAL DEPTH</b> : 11200 FT (TVD 11200 FT)  |
| <b>LOCATION</b> : LAT 69.15639 N, LONG -155.56889 W | <b>FORMATION</b> : Nanushuk / Torok Formation |

**I. DRILLING CHRONOLOGY & FORMATION SUMMARY**

The Awuna Test Well No. 1 was spudded on 1980-01-05 and drilled to a total depth of 11200 feet. The well evaluated petroleum potential and reservoir continuity within the Nanushuk / Torok Formation and underlying regional strata.

**DRILLING LOG HIGHLIGHTS:**

- Surface casing set at 1,450 ft with 650 sacks Class G cement to protect shallow permafrost/freshwater.
- Intermediate hole drilled with 9.8 ppg low-solids dispersed mud; stable hole conditions maintained.
- Target zone encountered from 8736 ft to 11200 ft with porous sand development.
- Core recovery averaged 94% across reservoir interval. Petrophysical analysis confirms good porosity.
- Electric logs (DIL-SFL, BHC-Sonic, FDC-CNL) and directional gyroscopic surveys recorded from TD to surface casing.

**CASING AND COMPLETION RECORD:**

| String           | Hole Size | Casing Size | Weight & Grade | Set Depth | Cement Sacks   |
|------------------|-----------|-------------|----------------|-----------|----------------|
| Conductor        | 20.0 in   | 16.00 in    | 65# H-40       | 120 ft    | 150 sx neat    |
| Surface          | 12.25 in  | 9.625 in    | 40# K-55       | 1,450 ft  | 650 sx Class G |
| Production/Liner | 8.5 in    | 7.000 in    | 29# N-80       | 11200 ft  | 420 sx Posmix  |
