GEOLOGICAL SURVEY – CONSERVATION DIVISION
USGS HISTORICAL NPRA WELL REPORT (CLEAN SCAN ARCHIVE)

WELL NAME : Midway-Sunset Deep-04	REPORT DATE : 2021-06-18
API NUMBER : 04-030-49201	ELEVATION : 1150.0 FT KB
OPERATOR : California Resources Corp	TOTAL DEPTH : 5420 FT (TVD 5210 FT)
LOCATION : LAT 35.18492 N, LONG -119.56214 W	FORMATION : Tulare / Potter Sand

I. DRILLING CHRONOLOGY & FORMATION SUMMARY

The Midway-Sunset Deep-04 was spudded on 2021-05-10 and drilled to a total depth of 5420 feet. The well evaluated petroleum potential and reservoir continuity within the Tulare / Potter Sand and underlying regional strata.

DRILLING LOG HIGHLIGHTS:

- Surface casing set at 1,450 ft with 650 sacks Class G cement to protect shallow permafrost/freshwater.
- Intermediate hole drilled with 9.8 ppg low-solids dispersed mud; stable hole conditions maintained.
- Target zone encountered from 4227 ft to 5420 ft with porous sand development.
- Core recovery averaged 94% across reservoir interval. Petrophysical analysis confirms good porosity.
- Electric logs (DIL-SFL, BHC-Sonic, FDC-CNL) and directional gyroscopic surveys recorded from TD to surface casing.

CASING AND COMPLETION RECORD:

String	Hole Size	Casing Size	Weight & Grade	Set Depth	Cement Sacks
Conductor	20.0 in	16.00 in	65# H-40	120 ft	150 sx neat
Surface	12.25 in	9.625 in	40# K-55	1,450 ft	650 sx Class G
Production/Liner	8.5 in	7.000 in	29# N-80	5420 ft	420 sx Posmix

CERTIFIED BY CHIEF GEOLOGIST:

J. R. Henderson, PE
