USGS HISTORICAL NPRA WELL REPORT (CLEAN SCAN ARCHIVE)

WELL NAME	: Rio Bravo Deep-1	REPORT DATE	: 2024-06-10
API NUMBER	: 04-029-50912	ELEVATION	: 350.0 FT KB
OPERATOR	: E&B Natural Resources	TOTAL DEPTH	: 11450 FT (TVD 11200 FT)
LOCATION	: LAT 35.41290 N, LONG -119.12450 W	FORMATION	: Vedder Sandstone

I. DRILLING CHRONOLOGY & FORMATION SUMMARY

The Rio Bravo Deep-1 was spudded on 2024-04-18 and drilled to a total depth of 11450 feet. The well evaluated petroleum potential and reservoir continuity within the Vedder Sandstone and underlying regional strata.

DRILLING LOG HIGHLIGHTS:

- Surface casing set at 1,450 ft with 650 sacks Class G cement to protect shallow permafrost/freshwater.
- Intermediate hole drilled with 9.8 ppg low-solids dispersed mud; stable hole conditions maintained.
- Target zone encountered from 8931 ft to 11450 ft with porous sand development.
- Core recovery averaged 94% across reservoir interval. Petrophysical analysis confirms good porosity.
- Electric logs (DIL-SFL, BHC-Sonic, FDC-CNL) and directional gyroscopic surveys recorded from TD to surface casing.

CASING AND COMPLETION RECORD:

String	Hole Size	Casing Size	Weight & Grade	Set Depth	Cement Sacks
Conductor	20.0 in	16.00 in	65# H-40	120 ft	150 sx neat
Surface	12.25 in	9.625 in	40# K-55	1,450 ft	650 sx Class G
Production/Liner	8.5 in	7.000 in	29# N-80	11450 ft	420 sx Posmix

CERTIFIED BY CHIEF GEOLOGIST:

J. R. Henderson, PE
